

FACE SHIELD

The **face shield FS 253** is designed to protect the user's eyes and face against **droplets and splashed liquid** from the front and side and against **low mechanical risks**. The FS 253 face shield meets the requirements of PPE (EU) 2016/425 and is designed and manufactured in accordance with the standard **EN 166: 2002** – personal eye protection.

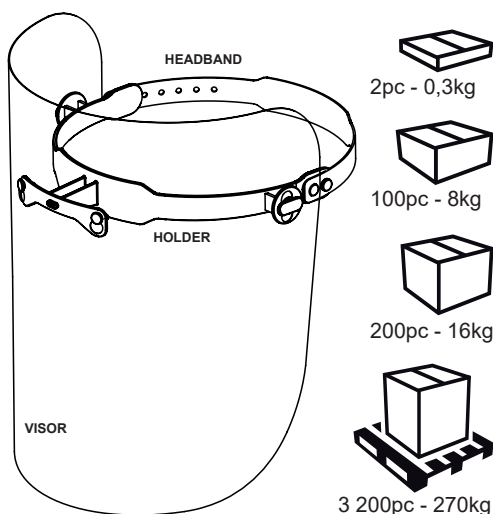

The shield is delivered disassembled for efficient handling and transport. The supporting part of the shield is made by plastic injection. Unique locks are designed for quick assembly and stable attachment of the visor to the supporting part with the possibility of easy replacement. Adjustable silicone headband and flexible carrying part ensure a comfortable fit for different head sizes.

Visor of the shield **FS 253** is made of highly transparent PC film (polycarbonate), it is suitable for use in healthcare or MI folders. The visor can be provided with an antifog or antiscratch layer. The FS 253 shield can be **completely autoclaved** at 121 ° C for 20 minutes.

The face shield is not intended to protect the user's eyes and face from optical radiation, molten metals, hot solids, coarse and fine dust, gases, arcs, low or high speed particles, or a combination of these options. The face shield does not provide 100% protection against infection transmitted by droplets or other distance means.
